INTRODUCTION

This publication represents the 70th annual report of pests and pathogens found in agricultural quarantine inspection. It is the 14th in the series to be assembled and printed from computerized interception records. It summarizes records of exotic living plant pests, pathogens, or weeds of quarantine significance found in, on, or with plants, plant products, carriers, and container vans, imported or entering into the continental United States and Hawaii or the offshore possessions, or moving between these areas.

Accumulated totals for organisms are listed under headings indicating either that the intended use of the contaminated host is consumption or propagation or that the item is not intended for importation and is designated as nonentry.

Incompletely identified organisms belonging to economic pest groups are included in the lists when they are not taxonomically separable to the degree required for a comprehensive pest risk assessment.

Honeybees of the genus Apis are included to reflect enforcement of the Honeybee Act of 1922, as amended in 1976.

Weeds are included to reflect enforcement of the Noxious Weed Act of 1974.

This list was compiled from interception records processed during fiscal year 1987. Insect, pathogen, mite, nematode, and weed

identifications made by personnel of Plant Protection and Quarantine (PPQ), Animal and Plant Health Inspection Service (APHIS); the Plant Sciences Institute (PSI), Agricultural Research Service; and cooperating scientists.

Scientific names of listed organisms were reviewed by scientists of PPQ and PSI. Scientific and common names of host plants were verified using Hortus III, Standardized Plant Names, and other botanical resources.

PEST ORIGIN

Countries of origin shown for pest interceptions are obtained from the best available source at the time of interception. They are not meant to be used for the purpose of providing distribution data for a pest. Though not meant to be definitive, every effort is made to ensure the accuracy of this information.
